# // LADDER CARRIER

## [ LADDER CARRIER FOR VANS ]

**Gain in productivity:** Unloads ladder from your vehicle in only a short time

**Easy to install:** No need for drilling into the roof of your vehicle\*

**Strong and light:** The fixing kit is made out of galvanized steel and the ladder rack in aluminum

**Ergonomic:** An easy solution to optimize your ladder's handling

**Safety:** A product that is specifically designed to preserve the safety of workers

- The handler is not under the load
- Loading and unloading can be done by a single person without climbing and all done at a person's chest height
- The ladder is fastened in place by fixing straps with quick tightening grips

\* Depending on vehicles and only on Ladder Racks installed by SFE.

Technical features

## I Technical information I

- > Types of Unloading: 1 side or 2 sides lateral unloading (right, left or both)
- > Ladder rack made of an alloy specifically selected to be within the admissible load as advised by manufacturers
- > Delivery with either: Mechanical lever hoist, or electrical motor
- > For one sided ladder rack (left or right), a half roof rack can be delivered as an extra
- > Roof container holders can be delivered as an extra
- > Installation is done without drilling: the fixing points are done at the points chosen by van manufacturers (holes or straps)

Triflash and light stands

Ladders
